

Handbook of modules for the study course Biological Resources, M.Sc.

Version October 2018

Biological Resources, M. Sc.

The most important details

Duration: 3 semesters (full time study)

6 semesters (part time study)

Location: Kleve

Qualification: Master of Science, M.Sc.

Course Start: summer term und winter term

Language: **English**

Master Thesis:

during 3rd semester (full time study) during 6th semester (part time study)

Calculation of Workload: 1 CP equals 30 hours per semester

Exams: all examination types as detailed in §14, 17–20

General Examination Regulations for Master's

Degree Programmes

Literature: Literature mentioned in the module descriptions

are first recommendations and do not replace the

syllabus of the module.

Attendance: Attendance of all seminars, exercises and lab

courses is mandatory.

This study programme is a

Curriculum Biological Resources, M.Sc. (full time study)

Instructors

Prof. PD Dr.-Ing. Sylvia Moenickes

Contents

Models: Cellular automata, individual based models, agent-based models; Monte Carlo methods; emergence, collective intelligence, robustness; statistics based interpretation

Programming: basic elements of Matlab code such as loops, conditions, arrays, plotting

Intended learning outcomes

On successful completion of this module, students should

- know properties of different models, systems, and statistical tools for interpretation¹
- understand basic Matlab code²
- be able to describe and implement models³
- be able to read implemented models, run these models in a meaningful way for different scenarios and interpret⁴
- be able to make clear statements on model-based projections.⁵

Teaching and learning methods

Seminar; self-study; group work; excursion; exercise; feedback

Entrance requirements

None

Reading list

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Examination

Graded exam acc. §§ 14 and 17–19 General Examination Regulations for Master's Degree Programmes

Teaching materials and media

Projector; white/black board; handouts; flipchart; visualisation aids for presentation; demonstration materials

BR_02 Animal Ecology and Ecosystem Services

Study semester: Summer term (full time)
Summer term 1 (part time)

Credit Points (ECTS): 5

Workload

Contact time		Self-study	
Lectures	30 h	Preparation for contact time	30 h
Lab course/Field course	30 h	Literature review	30 h
		Preparation for exams	30 h
Sum	60 h	Sum	90 h

Total workload: 150 h

Coordinator

Prof. Dr. William Megill

Instructors

Margarete Dytkowicz

Contents

Animal species and the niche concept, evolution, succession and natural selection; resources; intraspecific competition; dispersal, dormancy and metapopulations; interspecific competition; predation and population dynamics; community ecology; fluxes of energy and matter through ecosystems; the ecosystem as a resource for human economy: ecosystems services; mapping and quantifying ecological resources in economic terms; conservation science; ecosystems engineering

Intended learning outcomes

On successful completion of this module, students should

- safely conduct ecological fieldwork^{1,3}
- explain the role of animals in maintaining structure and process in ecosystem¹
- evaluate the changes in habitat structure in an ecosystem due to natural succession and understand the extent to which conservation management is the management of successional processes⁴
- assess the relative importance of abiotic factors influencing animal ecosystems in contrast to biotic factors from within the systems¹
- master the concept of ecosystem services and be able to describe and quantify them in a variety of ecosystems across a wide range of scales^{2,3}
- make a balanced assessment of the conflicts between conservation and other competing land uses^{4,5}
- appreciate the nature of landscape ecology and the importance of spatial relationships of such features as corridors and mosaics^{1,2}
- adopt a global attitude towards natural ecosystems in biomes and the large-scale processes which govern their diversity⁵

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Teaching and learning methods

Seminar; self-study; group work; excursion; exercise; feedback

Entrance requirements

None

Reading list

Begon, Townsend and Harper: Ecology: From individuals to ecosystems Sodhi and Ehrlich: Conservation biology for all. Society for Conservation Biology

Examination

Graded exam acc. §§ 14 and 17–19 General Examination Regulations for Master's Degree Programmes

BR_03 Soil Biological Resources

Study semester: Summer term (full time)
Summer term 1 (part time)

Credit Points (ECTS): 5

Workload

	Contact time		Self-study	
Lectures	15	h	Preparation for contact time	30 h
Seminar	15	h	Literature review	30 h
Lab course	30	h	Preparation for exams	30 h
Sum	60	h	Sum	90 h

Total workload: 150 h

Coordinator

Prof. Dr. Florian Wichern

Instructors

Dr. Conor Watson; Michael Hemkemeyer, M.Sc.

Contents

Soil microbial and macrobial resources and their potential use in biotechnology and agriculture (e.g. aromatics, antibiotics, remediation); influence of environmental and human factors (e.g. stressors) on soil biological resources; qualitative and quantitative determination of soil biota by classical techniques and modern molecular biological methods; detection of microbial functions, such as enzyme activity; use and development of cultivation and propagation techniques; application of soil biotechnology; experimental design and statistical analysis

Intended learning outcomes

On successful completion of this module, students should

- be familiar with soil microbial and macrobial resources and their possible uses¹
- know how soil biota is influenced by environmental and human abiotic and biotic factors¹
- be able to relate their knowledge about soil resources to its relevance in the bioeconomy and land use²
- apply special analytical lab procedures of soil ecology and microbiology in lab experiments³
- analyse and document results and findings in a scientifically appropriate form⁴
- analyse how their data compare with the data of others⁴
- be able to evaluate the potential of soil biological resources in biotechnology and land use⁵
- be able to critically discuss options of a sustainable use of soil biological resources ex situ and in situ⁵

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Teaching and learning methods

Lab course; field trip; lecture; self-study

Entrance requirements

None

Reading list

Killham: Soil Ecology

Prescott, Harley, Klein: Microbiology

Glazer: Microbial Biotechnology: Fundamentals of Applied Microbiology

Brock: Biology of Microorganisms

Various scientific publications for methods and comparison of results

Examination

Graded exam §§ 14 and 17–19 General Examination Regulations for Master's Degree Programmes

Instructors

Prof. Dr. Matthias Kleinke; Prof. Dr.-Ing. Frank Platte

Contents

Biological resources and their cycles; anthropogenic impacts on natural materials cycles; environmental impact; fundamentals in waste and water management; use and reduction of biological by-products; energy production from biological resources, utilization of biofuels and biomaterials

Intended learning outcomes

On successful completion of this module, students should

- explain the elements of the fundamental biological resources and understand their cycles 1,2
- know and understand basic concepts of environmental health and risk management^{1,2}
- describe and assess anthropogenic impacts on natural cycles and resources as well as environmental status^{1,2,3}
- value scarce resources and improve community understanding of the importance of closing circles and conserving those resources^{1,2,4}
- compare, understand, apply, and analyse fundamental laws and equations in circular economy^{1,2,3,4}
- outline and analyse the key elements of waste and water management^{1,2,3,4}
- identify the most important procedures of use and reduction of organic by-products and appreciate their importance with regard to possible economic effects^{2,3,4,5}

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Teaching and learning methods

Lecture; self-study; group work; excursion

Entrance requirements

None

Reading list

Bilitewski: Waste Management

Davis and Cornwell: Introduction to Environmental Engineering

Dahlquist: Biomass as Energy Source

Schaub and Turek: Energy Flows, Material Cycles and Global Development

Tomes, Prakshmanan and Songstad: Biofuels

Examination

Contents

Value chains link producers and consumers; along the chains firms create value for competitive advantage. Students will learn how biological resource sector(s) work, get an overview of the actors, organization and governance of biological resource value chains. Students will learn approaches of value chain analysis. Based on selected models from institutional economics and industrial organization students will study public and private governance of (sustainable) agrifood and biological resource value chains. Students will learn alternative approaches to environmental and sustainability accounting, reporting and management of sustainable agrifood and biological resource value chains.

Intended learning outcomes

On successful completion of this module, students should

- know selected models of institutional economics and industrial organization¹
- know principles of value chain analysis¹
- know principles of environmental and sustainability accounting and reporting¹
- know quality and sustainability management systems¹
- be able to relate their knowledge to agrifood and biological resource value chains²
- apply value chain analysis and environmental and sustainability accounting and reporting methods to the study of agrifood and biological resource value chains ^{3&4}
- document results and findings in a scientifically appropriate form^{4&5}
- design sustainability management systems of agrifood and biological resource value chains⁵

Teaching and learning methods

Lecture; self-study; case study; group work and presentation; field trip

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Entrance requirements

None

Reading list

Reading material will be distributed during the course

Examination

Graded exam acc. §§ 14 and 17–19 General Examination Regulations for Master's Degree Programmes

Instructors

Prof. Dr. William Megill

Contents

This course focuses on marine organism groups and environments, with a particular focus on coastal ecosystems and marine mammals. The course has the following parts: Introduction to marine biodiversity; basic taxonomy, identification techniques, identification literature and reference collections; Marine inventory methodology; specific techniques for the study of community ecology in the marine environment, quantification of biological diversity, potential for sustainable use of marine bioresources; Marine environments; marine biotopes (e.g. shallow/deep hard/soft bottoms, coral reefs, pelagial, interstitial environments, hydrothermal vents) and their characteristic ecological communities; Marine organism groups; systematics and morphology of mainly animals, but also marine plants, macro algae, eukaryotic microbes, archaea, bacteria, different adaptations to marine environments and potential as possible bioresources; Role of marine mammals in the coastal and offshore ecosystem. Marine mammals as beaters and/or indicators of localized bioresource stress. Marine mammals as a bioresource themselves: whaling vs marine ecotourism.

Intended learning outcomes

On successful completion of this module, students should

- identify and name common macroscopic species from the North Atlantic, with special focus on the North Sea
- recognise the larger organism groups and classify marine organisms to group
- identify marine organisms using appropriate literature
- identify and differentiate the characteristics of marine biotopes
- discuss taxonomic bases and apply these within the framework of marine inventories
- understand the special role played by the marine mammals in the marine ecosystem
- discuss the underlying factors (physical, biological, geographic and historical) that influence the biological diversity in marine environments

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Teaching and learning methods

Seminar; self-study; group work; excursion; exercise; feedback

Entrance requirements

None

Reading list

Lecture notes, Moodle, online resources

Examination

Graded exam acc. §§ 14 and 17–19 General Examination Regulations for Master's Degree Programmes: Term paper

BR_05.3 Use of Diversity in a Changing World

Study semester: Summer term (full time)
Summer term 2 (part time)

Credit Points (ECTS): 5

Workload

Contact time		Self-study	
Lab course/Field course	45 h	Preparation for contact time	35 h
		Literature review	35 h
		Preparation for exams	35 h
Sum	45 h	Sum	105 h

Total workload: 150 h

Coordinator

Prof. Dr. Steffi Wiedemann

Instructors

Dr. Elisabeth Müller-Peddinghaus

Contents

Acquisition of skills that are crucial to extent, distribute and stabilize the biodiversity in different parts of the world; change and turnover of biological diversity through time over large and small temporal scales (ecological and evolutionary processes); influences of human-related activities on transformation in ecosystems; tools and policies towards sustainable ecosystems; visits of sites which are related to biodiversity or are impacted by urban development; obtaining of environmental samples to assess the conservation values of that site; group projects

Intended learning outcomes

On successful completion of this module, students should

- have detailed knowledge on skills for the assessment of conservation values^{1,2}
- be able to critically review literature on the topic of biodiversity in a changing world^{2,3}
- be able to apply the knowledge and analyse the conservation value of different environmental sites within a group^{3,4}
- be able to critically discuss findings and define solutions or recommendations based on the acquired knowledge^{4,5}

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Teaching and learning methods

Lab course; self-study; group work; field trip

Entrance requirements

None

Reading list

Recommended reading material will be presented during the course.

Examination

Instructors

Prof. Dr. Marcel Friedrich

Contents

Participants will take over the leadership of a simulated company and face the challenge of making important business decisions in the area of all key functions of a business corporation, including procurement and production, human resource management, research and product development, and marketing and sales. The simulation also addresses the topics of product life cycle, personnel competence, productivity, reengineering, environmental aspects, corporate identity and shareholder value—oriented management.

Intended learning outcomes

On successful completion of this module, students should

- understand the fundamentals and concepts of core business functions^{1,2}
- define economic goals and strategies and implement them in a dynamic environment^{2,3}
- learn to use business tools like cost accounting and income analysis to make operational business decisions for a simulated company³
- analyse financial figures and operational results of previous business periods and adjust the overall business strategy to changing economic conditions^{4,5}
- define and solve problems in teams with the aid of data-processed planning models⁵

Teaching and learning methods

Computer-based management simulation; self-study; group work and presentation

Entrance requirements

None

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Reading list

TOPSIM - Participants manual "General Management"

Examination

Graded exam acc. §§ 14 and 17–19 General Examination Regulations for Master's Degree Programmes

Contents

Innovation management as an integral part of corporate management; description of innovation strategies in a corporate context; presentation of internal innovation process as well as the possibilities of external partnerships; the connection to the operational management of technology; organizational embedding of innovation management; discussion of specific case studies and application of modern methods of innovation management to practical examples

Intended learning outcomes

On successful completion of this module, students should

- be able to apply relevant concepts and methods of innovation management¹
- understand the need for and nature of innovation²
- be able to classify the innovation management in the corporate governance^{3,4}
- know concepts and strategies of innovation management^{1,4}
- can describe and apply the innovation process in a realistic context^{1,3,4,5}
- know the organizational forms of innovation management^{1,4}
- be able to apply creative techniques to the development of innovative ideas^{1,3}
- be able identify innovation opportunities^{1,3}

Teaching and learning methods

Lecture; self-study; group work; projects and / or case studies

Contents

The project is an individual or a group work on a specific scientific topic chosen from a variety of options offered by the professors. It includes extensive literature research, field or lab work and data analysis. Additionally, seminars are offered on scientific working and writing, on basics, regulations and relevant topics of biological resources, as well as including a section on research ethics.

Intended learning outcomes

On successful completion of this module, students should

- know the relevant aspects in the field of research chosen¹
- further advance their ability to search and summarize scientific literature in the relevant field of research independently²
- further advance their ability to organise and manage a project²
- apply relevant scientificmethods³
- present and document results and findings in a scientific report/article⁴
- analyse in depth how their findings are related to those of others⁴
- be able to critically evaluate the scientific methods used⁵
- be able to critically discuss their findings in the context of biological resource use and management⁵

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Instructors

Prof. Dr. Dagmar Mithöfer

Contents

Natural and environmental resources often constitute public goods for which market prices are lacking. Methods for valuation on non-market goods will be introduced to assess internal and external costs and benefits of natural resource use. Students will learn methods of private and social cost benefit analysis. Public programs and policies are interventions that target specific goals such as governance of natural resource use and beneficiaries. Impact assessments are done to understand whether these interventions work, how well they work and what does not work. Building on environmental valuation tools the course introduces ex post and ex ante evaluation as well as qualitative and quantitative methods of impact assessment.

Students will work with case studies and data for valuation of non-market goods; students will work with case studies and data to assess impact of public programs and policies.

Intended learning outcomes

On successful completion of this module, students should

- know the relevant concepts of valuation of non-market goods and cost benefit analysis¹
- know the relevant concepts and principles of impact evaluation¹
- be able to relate their knowledge in natural & environmental resource valuation cost benefit analysis and impact assessment to aspects of public program and policy design²
- be able to apply their knowledge by designing impact evaluation as well as valuation studies
- apply valuation methods of non-market goods, cost benefit analysis and impact assessment methods^{3&4}
- document results and findings in a scientifically appropriate form^{4&5}

Contents

Global scale and importance of forests; forest functions and services; introduction to forest growth; introduction to forest planning, management and utilization; principles of forest economics (Faustmann formula, temporal aspects, forest valuation); interests and conflicts in the forest sector; instruments of forest policy; global forest governance; forest certification and timber trade; forests and climate change

Intended learning outcomes

On successful completion of this module, students should

- know the relevant concepts and principles of forest management, forest economics and forest policy¹
- understand socio-economic theories and conceptual frameworks of forestry science and the current state of pertinent research²
- apply methods and analytical tools of forest economics and policy to contemporary problems of global forest management^{3,4}
- document results and findings in a scientifically appropriate form^{4,5}

BR_09 Underutilized Plant Resources

Study semester: Winter term (full time)

Credit Points (ECTS): 5

Winter term 1 (part time)

Workload

Contact time		Self-study	
Lectures	30 h	Preparation for contact time	30 h
Lab course/Field course	30 h	Literature review	30 h
		Preparation for exams	30 h
Sum	60 h	Sum	90 h

Total workload: 150 h

Coordinator

Prof. Dr. habil, Jens Gebauer

Instructors

Dr. Katja Kehlenbeck

Contents

This module covers different aspects of underutilized plant genetic resources such as taxonomy, morphology, physiology, biochemistry, genetics, cytology and ethnobotany. It includes examples from gene bank management: collecting, maintenance, evaluation, storage and documentation. Areas of interest include crop evolution, domestication, crop-weed relationships, agrobiodiversity related wild species and the history of cultivated plants including palaeoethnobotany. Wild fruit tree species will play a key role to understand utilisation, promotion and conservation strategies of underutilized plant resources.

Intended learning outcomes

On successful completion of this module, students should

- know the different aspects and their underlying methods of plant genetic resources¹
- have extensive botanical knowledge on plant genetic resources¹
- be able to identify, characterise and maintain plant genetic resources^{3,4}
- be able to set up research strategies to utilise, promote and conserve plant genetic resources⁵

Teaching and learning methods

Lecture; self-study; group work; excursion; feedback

Entrance requirements

Basic knowledge in botany

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Reading list

Akinnifesi et al.: The fruits of success: A programme to domesticate West and Central Africa's wild fruit

trees is raising incomes, improving health and stimulating the rural economy

Chittaranjan: Wild Crop Relatives: Genomic and Breeding Resources

Collins and Qualset: Biodiversity in Agroecosystems Hancock: Plant evolution and the origin of crops species

Kumar and Nair: Tropical homegardens a time-tested example of sustainable agroforestry

Leakey: Living with the trees of life towards the transformation of tropical agriculture

Journal of Genetic Resources and Crop Evolution

Journal of Plant Genetic Resources: Characterization and Utilisation

Wickens and Lowe: The Baobabs: Pachycauls of Africa, Madagascar and Australia

Examination

Graded exam acc. §§ 14 and 17–19 General Examination Regulations for Master's Degree Programmes

Contents

Nature of essential raw materials of plant/animal and microbiological origin; secondary (plant) metabolites; processing of selected raw materials; recovery of valuable components from by-products and waste resulting from food industry; fermentation processes

Intended learning outcomes

On successful completion of this module, students should

- know and understand the nature of important biological raw materials¹
- know the basics about main processing methods applied in food industry and biotechnology¹
- know relevant examples for utilization of by-products and waste resulting from food industry²
- apply the knowledge in developing solutions for case studies with regard to food processing and biotechnology³
- be able to critically discuss possibilities, challenges and shortcomings of processing biological resources under particular socio-economic and cultural circumstances^{4,5}

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Teaching and learning methods

Lecture; self-study; group work; excursion; case studies; lab course

Entrance requirements

Basic knowledge in chemistry, biology, and physics

Reading list

will be provided by lecturer

Examination

Graded exam acc. §§ 14 and 17–19 General Examination Regulations for Master's Degree Programmes

Total workload: 150 h

Coordinator

Prof. Dr. Steffi Wiedemann

Instructors

Prof. Dr. Steffi Wiedemann

Contents

Relevance of animals for bioeconomics (wildlife, farm animals, aquaculture, others); wildlife and farm animal bioecology; influence of biotic and abiotic factors on animal health, production and bioeconomics; management of biodegradable feedstocks such as manure, animal waste and associated matter fluxes from a bioeconomic perspective; effects of wildlife and of farm animals on the environment (e.g. production of greenhouse gases, sequestration of greenhouse gases in grassland, nutrient imbalances, landscape aspects); determination of resource use efficiency and potential nutrient release using different techniques

Intended learning outcomes

On successful completion of this module, students should

- understand the relevance of animals for bioeconomics¹
- have a profound knowledge on the management of biological resources derived from animals²
- be able to apply methods to compare the resource use efficiency of different agricultural systems³
- be able to critically compare publications about animals in bioeconomics⁴
- be able to evaluate interactions of animal and bioeconomics based on acquired knowledge⁵

Teaching and learning methods

Lecture; self-study; group work; literature review

Entrance requirements

Sum	45 h	Sum	105 h

Total workload: 150 h

Coordinator

Prof. Dr. Florian Wichern

Instructors

Prof. Dr. Florian Wichern; Dr. Conor Watson

Contents

Rhizosphere as an environment of autotrophic and heterotrophic interactions; monitoring root development, morphology and physiology in space and time; factors influencing root development; visualising and quantifying plant-microbe interactions; making use of rhizosphere processes in biotechnology and land use (e.g. phytoremediation, bioelectricity); using classical and modern visualisation techniques for qualitative and quantitative root assessment (e.g. root scanning, microscopy, molecular markers); collecting and analysing organic and inorganic components of root exudates and rhizosphere solution; experimental design and statistical analysis

Intended learning outcomes

On successful completion of this module, students should

- know how roots develop in space and time and which factors influence their development¹
- know how rhizosphere processes can be used in biotechnology and land use management¹
- be able to relate their knowledge of rhizosphere processes to their relevance in the bioeconomy and land use²
- apply special analytical lab procedures of root ecology in lab experiments³
- analyse and document results and findings in a scientifically appropriate form⁴
- analyse how their data compare with the data of others⁴
- be able to evaluate and critically discuss the potential use of rhizosphere processes in biotechnology and land use⁵

¹Knowledge; ²Comprehension; ³Application; ⁴Analysis; ⁵Synthesis and judgement

Teaching and learning methods

Various lecturers

Contents

In this lecture series students will be exposed to interdisciplinary perspectives on biological resources and their management. Invited lecturers will present results and methodological approaches of their recent research and professional work in the field of biological resources and related disciplines. The lectures will provide participants with the opportunity to experience and engage in academic debate thereby obtaining further stimuli to define the topic of their own research project.

Intended learning outcomes

On successful completion of this module, students should

- understand core concepts of global biological resources and their sustainable management^{1,2}
- know the predominant discourses and theories in managing and governing these resources²
- know methods and analytical tools used in contemporary research on biological resources²
- identify the key factors that determine the state and resilience of global biological resources^{3,4}
- document results and findings in a scientifically appropriate form^{4,5}

The content of the colloquiums is based on the master thesis.

Intended learning outcomes

The students present the results of their master thesis during the colloquium. They put their research and findings in a context with the practical approach and present their findings in a scientific and structured way. The students justify their chosen approach autonomously by taking into consideration how far their results were influenced by assumptions/presuppositions and simplifications. They are able to analyze questions regarding their thesis and their findings and to answer these within the frame of the technical and non-technical context.
